Features and Benefits

The Stanley **RD11** Rail Drill is a rugged hydraulic powered drill with all of the features that give speed, reliability, accuracy and extended bit life.

The **RD11** features an automatic bit feed that eliminates clutches, gears, and shims found on competitive models. A unique pressurized coolant system directs the coolant precisely to the tip of the bit. Because of the automatic feed mechanism and the pressurized coolant system, the **RD11** boasts superior bit life over that of competitive drills.

The versatility of the **RD11** allows drilling in heel blocks, guard rails and joint bars. The **RD11** also features a quick acting over center clamp and a complete package weight of only 85 pounds.

The **RD11** can be powered by Stanley's HPR dual circuit Power Unit or just about any appropriate mobile or portable hydraulic system.
